

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. The Commonwealth of Massachusetts.

TRUSTEES' REPORT.

To His Excellency the Governor and the Honorable Council.

The trustees of the Industrial School for Boys beg leave to submit this, their second annual report, for the year ending Nov. 30, 1910.

The school has now been open a year and four months. Its capacity for the year covered by this report has remained that of 100 boys, the same as at its opening. Two new dormitories, with a capacity of 30 boys each, are now in process of construction, and one of the original Shaker buildings is being remodelled to accommodate 25, thus giving the school during the coming year, when these three buildings are completed, a capacity of 185 boys. These three cottages will be opened as fast as ready.

The school was entirely filled in a little over four months after it opened; and then the trustees, under the authority granted them under Acts of 1909, chapter 472, requested the courts to make no further commitments except by first communicating with the school, to learn whether there were vacancies existing. No vacancies arose, except because of a few minor transfers from illness, disease or other cause, until the 1st of August of the present year. Then the first boys committed began to be released on parole, and their places have been taken by new commitments. During the last four months 54 boys have been released on parole. The major part of those so released have either had homes which were deemed proper for them to return to, and through which employment was forthcoming, or else have had relatives who have assumed personal charge of them. The others have had work secured for them. We have thus far, in view of the circumstances and on account of the limited numbers, had no regular parole officer

whose duties were only such; but this work has been done by the acting superintendent, by Mr. Whitcomb, otherwise employed at the school, and in some cases by the men under whom the particular boys have been employed at the school, and who have been, therefore, most conversant with their capabilities. It will be necessary, however, early in the new year, as the numbers for parole increase, to have a regular parole officer. While it has now been too short a time to warrant the making of any general statements concerning the future of the first group of boys released, it is certain that at present, and as fast as they have been released, all, with two or three exceptions, have gone to work and for the most part are doing very well. Their wages range from \$17 a week, the highest, to \$4, the lowest, this wide variation being due in part to the various differences in size and maturity of the boy and his consequent earning capacity, and in part to the difficulty in finding such employment as would be preferred at this season of the year.

The character of the boys we have lately received does not vary essentially from those first received. None of them ought properly to be classed as criminals, though they would have to be so classified and so treated, generally speaking, if our institution could not take them; but they are, rather, younger members of society who have forfeited for a time their privilege of remaining a part of it, because they have so conducted themselves that it will no longer excuse or condone their offences. Most of them have slipped through the more lenient meshes of probation, and to save them from their environment, and ultimately for themselves and for society, they have been deemed proper subjects for temporary segregation, and are sent to us for institutional treatment, where their entire manner of life may be regulated and constantly supervised. Though, it may be presumed, they have already offended many times, or else they would not come to us, they are not habitual offenders in the usual usage of that term; but they are still in that period of life when their whole character may be rebuilt upon a new foundation, or at least radically modified. While they have not yet crossed the dividing line between offenders and criminals, many have such foundations and prospects that it does

not require a prophetic eye to foresee that, if left unrestrained to follow their own bent, they would shortly be permanently landed in the latter class, charged with breaches of the law of such magnitude as to be weighed by juries and passed upon by higher courts, and therefore, when not a prey upon society, a permanent expense to it. We have not, therefore, supposedly to deal with the habitual criminal, nor with the instinctive criminal with some great physical abnormality or subnormality; but rather with the ordinary juvenile one, between fifteen and eighteen years of age, who, through unfortunate industrial conditions in his family, or perhaps without parents to pilot him through youth, or because not strong enough for the persuasive temptations of environment, or for some other weakness, physical or external, has taken the law into his own hands, and for a time has lost his way in society and become a derelict of it. We believe that as such they are not subjects for punitive treatment, primarily, to be put through a stern and strenuous course, by harshly dealing out to them the heavy hand of the law, endangering thereby the breaking of their spirits, and making a criminal career appear as the only solace for their discouragements; but instead we believe that they should have curative and deterrent treatment, by training them in their minds, in their muscles and in their morals, so that they may be returned to the community sufficiently trained and sufficiently matured in their general make-up to be received back into it with as little prejudice as possible, and without harm to it or to themselves, and prepared to earn an honest and creditable livelihood. We believe that our ultimate product must be manhood. To secure this, what is good must be encouraged, what is bad must be discouraged; what is hard must be softened, what is weak must be strengthened; what is right must be instilled, what is wrong must be annihilated.

The treatment of each case, to be effective, has necessarily to be largely individual, and calls for patience and foresight. The first endeavor is to make a healthy physical body upon which to build the future. Whatever is known of their life histories, of their antecedents and of their environment is important, and must be carefully pondered, as tending to throw light upon the causative forces of their past careers, and as a

basis for the reforms to be inaugurated, both by means of individual and institutional treatment, looking to their reinstallation in the community and for their conversion into industrious and law-abiding citizens. They are all wordly wise. In many respects they are bright and alert, and in other respects — and these not without explanation — childlike and morally deficient. With us they are fortunately removed from contact with the outside world, and are not mingled with older criminals, from whom they would hear life stories of mature wrong-doing, and so become saturated by reiteration with the idea that it is hopeless to mend their ways. They are also, fortunately, not left in idleness and isolation, with much time for brooding and introspection, but from the outset are removed from the past into an atmosphere of industry and of uplift, without thought of punishment or degradation, where they can see at close range that endeavor, good conduct and efficiency are rewarded by kindness and the repose of trust and confidence. Soon, to some extent unconsciously, the elements of pride and rivalry to outdo their fellows, combined with the reflection which the isolation of the place, apart from previous influences, tends to induce, and combined in varying degrees with remorse for the past, submerge the baser and the lower and lift them into the better and the higher. Self-reliance is stimulated, trustworthiness is rewarded by greater freedom, and efficiency by advancement. There is nowhere the idea of inflicting punishment for the old offence committed. Good conduct and industry spell speedier release, and come to have a real value to the individual which they never before had ; gradually both become a part of the character of the individual, and remove him farther and farther from the ranks of the future criminal.

Every boy works, in some departments seven hours a day, except Saturday afternoons. With this employment, and with hours for recreation and for eating, the day is consumed with little or no opportunity for loneliness and introspection. Release is earned by earning credits. These are given half for conduct and demeanor and half for efficiency and industry, and are so regulated that a boy can earn his release in sixteen months. Whether this is long enough as a minimum to keep boys who, it must be assumed, have broken over the probation

system before coming to us, and whether they will have in this time regained sufficient mastery of themselves to become industrious citizens and members of society, only long observation can more than approximate. They certainly leave us with ten to sixty pounds more of brawn and from one to six inches more of height than upon their arrival, with which to make their way in the world; and we hope they have become thinking individuals, instilled with ideas of responsibility, with knowledge of and with regard for what is right, and with sufficient industry to pilot them through their old temptations into respectable citizenship.

POLICY OF BUILDING INAUGURATED.

During the past year we have firmly inaugurated a policy of doing our own construction. We have now one new dormitory under way, for 30 boys, and another being remodelled, also half completed, for 25. The work is under the direction of a head builder of experience, a mason is regularly employed, and the work is done by boys, with occasional help from the outside. We have also built an ice house, 30 by 40 feet, all except the outer walls being done by boy labor; two hen houses, 100 by 16 feet each; have moved and reset some smaller buildings, besides doing endless repairing and small jobs. We are now also starting an enlargement to the creamery, which will be completed early in the year. This building policy not only gives us buildings just as we want them, but employs and trains the boys practically, and will save the State money. If we are to meet the demands of the courts for supplying accommodations for new commitments, we shall have building of divers kinds to do for a long time to come, and this we plan to do in all respects possible with home talent.

BETTERMENTS AND REPAIRS.

When the institution was opened it was developed only at the living quarters; everything else in the way of repairs and other things not absolutely necessary was left to be done by home talent. In this construction, restoration and reclamation we have worked hard the whole year. Grading has been done; miles of fence rebuilt; brush, wood and lumber cut; and small stumps pulled from many acres around the bush-grown fences.

Hundreds of apple trees have been trimmed, and all of them scraped for scale and searched for moths. Stone walls have been torn away or rebuilt and ditches and drains laid. Nearly every building on the place has been given from one to three coats of paint on the outside, and, in the case of cottages, throughout on the inside. Withal, the end of year finds, us a more nearly presentable institution, as compared with the makings of one with which we started the year.

FARM, STABLE AND GROUNDS.

The course of bringing up a run-down farm is somewhat slow, but the results attained by our farmer have been conspicuous. About 70 acres were put under the plow; 40 acres of corn, 6 acres of potatoes and 8 acres of garden vegetables, besides various crops of grain, have been harvested. Two large silos have been filled, and every available space has been packed with vegetables. Two new teams have been acquired, making the supply adequate, barring accidents, for the next few years. The new hen houses have been stocked with high-class stock of our own breeding. A hundred pigs and hogs have been raised, and a basis laid for a permanent and continuous supply of home-grown pork. A large number of high-grade young cattle have been raised. The herd has been weeded out, and, with the acquisition of a few new cows, has been so ordered that an adequate supply of dairy products will be forthcoming to meet the new demands through the twofold increased population during the coming year.

INDUSTRIES.

The carpenter shop boys, after the machinery was installed and the shop was fitted up, have made during the winter upwards of three hundred heavy removable screens for the windows; have gotten out and finished the lumber, most of which was home-grown, for the hen houses; and have since supplied finishings for the new buildings being constructed. The blacksmith shop boys have done an endless amount of general repairing, have built one new cart and one new big sled, and have rebuilt and repaired several other vehicles. The paint shop boys, besides painting the outsides of the buildings, re-

painted the insides in many cases, and have overhauled and repaired the old housing accommodations for help, besides painting all the farm wagons and sleighs, etc.

GENERAL, HEALTH, ADMINISTRATION, ETC.

On July 31, 1910, Herbert F. Taylor resigned to resume public school superintendency, and Elmer E. Butterfield, who had been at the school since its opening, was appointed acting superintendent.

The health of the institution has been good, without epidemics. The conduct of the boys on the whole has been very creditable and encouraging.

Though the boys when they come to us are beyond the required public school age, during the school year all were given instruction in English and arithmetic, greater attention being given to those of foreign birth and to the more deficient. In addition, the boys in the industrial departments were given instruction in subjects correlated with their industries, those in the cooking department being taught the theory and practice of cookery; those from the farm, elementary agriculture in part and forestry and gardening in part; those in the carpentry and blacksmith shop, mechanical drawing and studies in construction; those with the painter, freehand drawing and the theory of color, and color mixing and designing.

There has been an endeavor to so make up the official force that every one living at the school should be employed, and therefore a contributing unit to the administration of the institution. This matter has been so adjusted, with a view to present and immediate future needs, that, with the addition of extra cottage masters for the new cottages and of one or two outside officers, there will probably be no further additions necessary to care for the increase in numbers for the coming year; in other words, so that the cost of administration and officering 185 boys will be but slightly more than for the present number, even though the extensive improvements prosecuted this year are continued.

REQUIREMENTS.

With only 100 boys, and with all the work of repairing, construction and out-of-door work which has been at hand the past year, the boys who have not been occupied in our tem-

porary shops and domestic departments have been kept busy ; but with even 85 more, which the close of the year will find with us, the problem of employment alone will be very difficult, let alone that of giving any considerable number of them a knowledge of a trade or of an organized industry by which they can earn a sustaining and creditable living after leaving the institution. While the farm and out-of-door life makes strong and healthy boys, for various reasons we cannot train all to be farmers. If we should try to do this, the community could not assimilate such numbers of our class of boys so trained ; and it would also mean taking the majority of the boys who have come from urban environments and transplanting them to the farming districts, to a life distasteful for the most part, with the consequent result of early idleness and the undoing of what has been done for them.

We have developed the trades at the school conservatively. We have waited until we should know what the capacities of our population, both physical and mental, should be ; and until, with this knowledge, we could approximate the industries affording greatest opportunities to our type of boy. The time, however, has now arrived when we must have adequate shop facilities, not only for employing the constantly increasing numbers, but also in fulfilling the purposes for which the school was designed, and for its development along the lines which our experience has shown us it should develop. Adequate shop equipment is, therefore, we believe, the most imperative equipment need of the school ; and with the shops there must be provision for power to operate them. In connection with the power plant we need permanent lighting facilities large enough to cover the institution, and to do away throughout with the use of kerosene lights, the use of which is at best fraught with danger. We also need the beginning of a heating system which will heat a part of the institution at once, and eventually all of it.

With the future development of the school in mind, your trustees have laid out a comprehensive plan for the development of an institution for the accommodation of from 400 to 500 boys. This layout includes a system of shops with power, lighting and heating plant, and a series of cottages and other

buildings, making the present buildings units of a whole. The new layout is itself upon the unit system, so that progress by yearly additions may be made toward the completion of a whole. The plan looks to the grouping of the shops and domestic buildings near the power, light and heating plant, apart from the housing facilities. It also contemplates the grouping of the farm buildings at the north end of the premises, making, as in the case of the cottages, the present buildings parts of a whole.

SUMMARY.

For the next year, all of which is a part of the plan for developing the whole, as new equipment, we need very much a thoroughly equipped central shop building, and with this a power, lighting and heating plant and coal pocket, all properly equipped and connected with our present plant.

We need a new cottage for 30 boys, to partially meet the present demands of the courts of commitment.

We need a telephone system, connecting the offices with the various cottages and departments.

We need a steam-heating system for the brick cottage now being remodelled, which could not be provided for from the original appropriation, from the last of which the cottage is being remodelled.

We are in great need of a piggery and of a root and vegetable cellar.

For rearrangement of the present buildings, a small cottage should be moved from the front of the brick building now being remodelled, and be relocated, repaired and an ell added, as a cottage for employees.

The farmer's cottage, so called, should have, as it was originally planned to have when it was moved and partially remodelled, an ell for a kitchen and pantry.

We also need very much, for the new shops, additional wood-working machinery for the carpentry and cabinet-making shops, additional blacksmithing facilities, and equipment for a machine and printing shop.

We also need concrete walks to connect the existing cottages and the administration and domestic buildings, which are at present without any artificial walks.

The trustees believe that the extension of the provisions of section 2 of chapter 472 of the Acts of 1909 for a period of two years longer, whereby they are granted the authority, when the school is full, to so notify the courts of commitment, is essential for the welfare and development of the school; otherwise, the school, with its present limited accommodations, can, so far as the law is concerned, be swamped by transfers and commitments.

In closing, the trustees wish to express their gratitude to each and every officer who has lent his best efforts for the welfare of the school, and to all friends of the school who have contributed to its welfare and development.

Respectfully submitted,

DAVID F. SLADE,

Trustees Industrial School for Boys.

Nov. 30, 1910.

ACTING SUPERINTENDENT'S REPORT.

To the Trustees of the Industrial School for Boys.

The year now closed has witnessed several changes in the governing body at the school, not the least of which was the resignation, on August 1, of your superintendent, Mr. Herbert F. Taylor.

Having been chosen acting superintendent, it becomes my duty at this time to submit to you a report of the work of the school during the year.

Fifty-four boys have earned their parole, all but 7 of whom returned to their homes, positions having been secured for them by their parents or friends. We have kept in touch with these paroled boys, through the visitations of Mr. Whitcomb and in other ways, and know that all of them, with the exception of 3, are doing well.

Boys when received at the school are as a rule lacking in habits of industry. Most of them have worked intermittently at various occupations, but rarely is one received who can be depended upon to do a fair day's work. The change in many of these boys has been very marked, due in part to wholesome food, fresh air, regular hours of rest, and in part to realizing that a fair day's work is expected of them. As their knowledge of what to do and how to do increases with their strength and ability to perform, they not infrequently develop into good and willing workers, well qualified to earn their own living when placed on parole. This fact has been demonstrated again and again during the past year.

Twelve boys have been employed in the carpenter shop, in connection with our industrial training departments; 6 in the blacksmith shop; 9 in the paint shop; 4 in the engine room; 3 in the laundry; 1 in the cobbler shop; and 6 in the cook house. There are 15 boys employed about the different cot-

tages, who remain at that work only one week in six. The other boys are employed upon the farm and about the farm buildings. All the work about the institution, so far as practicable, is performed by the boys under the direction of their instructors.

During the winter of 1909 and the spring of 1910 the carpenter shop boys were employed in sealing up their shop and setting up their machines, and in building benches for 12 boys, each bench equipped with drawer for tools. When completed and machinery in running order, the boys were set at work making screens to screen all the windows in the different buildings, requiring 265 in all.

The studding and walls of the new ice house were built by contract. The house was then filled with ice, our boy carpenters doing all the boarding, shingling and finish work.

They have built two hen houses, each 100 by 16 feet wide, all the lumber except the inside finish and shingles being grown on the place.

Early in the summer the boys began remodelling the North Cottage to make a dormitory to accommodate 25 boys. At our present writing the building is ready to plaster. All the carpenter work and slating have been done by the boys and their instructors.

The excavating for Cottage No. 5 was done by the farm force. The mason with his force put in the concrete walls, using one hundred barrels of cement.

Our farm force has been called upon this year to perform many duties outside of their regular farm work. Foundations for the hen houses, granary and brooder house were laid, grounds around same graded; and many rods of drain have been laid, besides grading done about the various buildings.

One boy has been employed in the cobbler shop repairing shoes, and 3 boys are at work in the sewing room making overalls and repairing necessary clothing.

The religious services for the Catholic boys have been for the last half of the year in charge of Rev. Charles F. Bridges of Boston College, who comes weekly to the school, and before that they attended services at the Catholic church in Shirley. The Protestant boys have attended church throughout the year

at the Shirley Congregational church. Services for the Hebrew boys were early in the year in charge of weekly volunteers, and for the last half-year in charge of Mr. Samuel Price, who comes regularly to the school. Very faithful and painstaking work has been done by all these men, and the results of their labors have been apparent in the improvement in the attitude and conduct of the boys.

Our school was maintained until about the middle of July. The school periods were divided as follows: 7.30 to 8.30, paint shop and blacksmith boys; 8.30 to 9.30, carpenter shop and engine room boys; 10 to 11, dairy boys, under the instruction of the dairyman; then a class made up of deficient boys, who had not mastered the English tongue. In the afternoon from 2 to 3 came the hall and kitchen boys, and from 3 to 4.30 the farm boys. Later in the year special instruction was given in lettering and sign painting to members of the paint force, by the instructor in charge, Mr. Barrows.

The band referred to in last year's report developed successfully, and before its membership was depleted by paroles in the early fall made several very creditable appearances in public, particularly on Memorial Day, Fourth of July, and in concert work. Two members of the band, now paroled, are playing in a band in a neighboring town.

Entertainments for the benefit of the boys have not been of frequent occurrence. One of the most delightful was a stereopticon lecture on "Hiawatha." In the early fall four of the older boys took it upon themselves to have a minstrel show. They struggled alone for a few evenings, then appealed to the superintendent for assistance, and the plan finally took shape under the leadership of Mr. Barrows, who had had much experience in that line of work. The boys selected for the principal parts and for the chorus, some thirty in number, became greatly interested, and worked hard to make the show a success. It was given before the school on the evening of November 16, and was of such a character that the following week it was repeated by request in Odd Fellows Hall, Shirley, for the benefit of the Shirley Athletic Association. In this connection we desire to thank the friends of the school who have so ably and willingly assisted in making the various entertainments of the year so thoroughly enjoyable.

The principal outdoor sport of the boys has been that of baseball. During the past summer a very creditable baseball team was developed, which was successful in competition with outside players. Football and other outdoor games have also afforded recreation and healthful exercise for the boys while not engaged in their appointed duties.

Attention is called to the accompanying tables, presenting statistics concerning the boys received during the year. It will probably not escape the notice of the casual reader that while nominally boys, they are in reality young men, with a knowledge of the evil in the world obtained unhappily by actual experience. As young men, they must be treated as such. It has been found that the average boy committed to this school, like most boys of his age, appreciates recognition and fair treatment, and that, in spite of his incomplete early training, he will in most cases respond to the wishes of his instructor, and will cheerfully co-operate with him in performing an assigned task. In this fact lies the hope of the school.

In concluding his report, the acting superintendent wishes to acknowledge his indebtedness for assistance received from trustees, officers, boys and friends of the school, enabling him to take up and carry forward to the close of the year the work laid upon him; and to express the hope that the coming year will witness a decided growth in those things that shall tend to make the school successful in the mission of good it has been created to accomplish.

Respectfully submitted,

ELMER E. BUTTERFIELD,

Acting Superintendent.

SHIRLEY, MASS., Nov. 30, 1910.

PHYSICIAN'S REPORT.

To the Trustees of the Industrial School for Boys.

The past year has dealt kindly with the medical department, and the health of the institution as a whole has been good. Besides, everybody who has been paroled upon this examination has shown gain in health and weight since his examination upon his admission to the school. While there have been 3,400 cases treated as out-patients, only 37 have been treated as inmates of the hospital. The bulk of cases treated as out-patients consisted of local infections, such as boils, small abscesses, tonsillitis, and slight disturbances of the digestive tract.

There have been many minor accidents treated, such as cuts, bruises and sprains, etc., but only two more serious ones. These last were injured in the use of the laundry machine, and were successfully treated at the school.

One case of diphtheria appeared in the school during the year, and was promptly taken care of and quarantined. Every inmate of the institution was given an immunizing dose of antitoxin, which course removed the danger of an epidemic.

The tuberculous and epileptic cases were transferred to other State institutions.

Two inmates have been sent to the Massachusetts General Hospital: one with a serious heart lesion, from which he was suffering when committed to the school; and the other for an operation for hernia. Both of these made good recoveries, and in good time were paroled.

During the year November, 1909, to November, 1910, 81 have been admitted to the school. Each of these has been examined and his history recorded.

Three boys have been operated upon for the removal of adenoids and one for the removal of tonsils.

The eyes and ears of the boys have been examined by a specialist, and all needing treatment have received it.

The need is more evident, since the school has become filled, of more extensive hospital facilities, and particularly the need of a suitable isolation ward for contagious diseases and suspicious cases.

I wish to thank the trustees and officers of the school for their co-operation and unfailing courtesy.

Respectfully submitted,

THOMAS E. LILLY, M.D.,

School Physician.

SHIRLEY, MASS., NOV. 30, 1910.

TREASURER'S REPORT.

To the Trustees of the Industrial School for Boys.

I respectfully submit the following report of the finances of this institution for the fiscal year ending Nov. 30, 1910:—

CASH ACCOUNT.

Receipts.

Institution Receipts.

Sales:—

Clothing and materials,	\$37 10
Farm, stable and grounds:—	
Cows and calves,	\$50 50
Pigs and hogs,	317 69
Hides,	1 50
Sundries,	1,531 47
	1,901 16

Miscellaneous receipts:—

Interest on bank balances,	\$22 39
Sundries,	53 13
	75 52

\$2,013 78

Receipts from Treasury of Commonwealth.

Maintenance appropriations:—

Balance of 1909,	\$10,499 86
Advance money (amount on hand Nov. 30),	2,000 00
Approved schedules of 1910,	40,340 93
	52,840 79

Special appropriations,	1,495 50	
-----------------------------------	----------	--

Total,	\$56,350 07	
------------------	-------------	--

Payments.

To treasury of Commonwealth, institution receipts,	\$2,013 78	
--	------------	--

Maintenance appropriations:—

Balance November schedule, 1909,	10,499 86
Eleven months' schedules, 1910,	40,340 93
November advances,	565 43

[illegible]

LEGISLATION ENACTED CONCERNING THE INDUSTRIAL SCHOOL FOR BOYS.

ACTS OF 1908, CHAPTER 639.

AN ACT TO PROVIDE FOR THE ESTABLISHMENT OF THE INDUSTRIAL SCHOOL FOR BOYS.

Be it enacted, etc., as follows:

SECTION 1. The governor, with the advice and consent of the council, shall, during the month of June of the current year, appoint a board of seven trustees, two of whom shall be women, in whom and in their successors shall be vested the government and management of a school for the industrial training and for the instruction and reformatory treatment of boys committed thereto. Said institution shall be known as the Industrial School for Boys. The terms of office of the trustees shall begin on the first day of July following their appointment. Of the trustees first appointed under this act two shall hold office for two years, two for three years, two for four years and one for five years, or until their successors are appointed; and the governor shall appoint annually thereafter, in the month of June, successors of the trustees whose terms are about to expire, and such successors shall hold office for five years from the first day of July next ensuing. Said board shall be a corporation for the purpose of taking, holding and investing in trust for the commonwealth any grant or devise of land, or any gift or bequest of money or other personal property made for the use of said school. Said trustees are hereby authorized to purchase, in behalf of the commonwealth, real estate, with such personal property as may be upon the same, as a site for said school.

SECTION 2. With the approval of the state board of charity the trustees may erect new buildings, and may alter and repair buildings upon the property purchased. They may also equip and furnish buildings so erected, altered or repaired. Said trustees shall have authority to make all contracts and employ all agents necessary to carry out the provisions of this act. Their reasonable expenses incurred in the performance of their duties under the first two sections of this act shall be paid from the appropriation for carrying out of the provisions hereof. For the purpose of carrying out the provisions of the first two sections of this act the trustees of said school may expend a sum not

exceeding eighty-five thousand dollars, but no expenditure shall be made under said sections except for the purchase of a site for said school and for plans, until said state board shall certify that in its opinion the cost of purchasing land and buildings, as aforesaid, of altering and repairing buildings upon the land purchased, of erecting and making ready for occupancy any new building or buildings under the provisions of this section, and of furnishing and equipping any building erected, altered or repaired as aforesaid, will not exceed eighty-five thousand dollars, and the total expenditures made and liabilities incurred under the provisions of said sections shall not exceed that amount.

SECTION 3. When the buildings are ready for occupancy the trustees shall notify the governor, who shall thereupon issue his proclamation establishing said school; and thereafter, if it shall appear to any police, district or municipal court or trial justice that any boy not less than fifteen years of age who has been adjudged to be a delinquent child, or any boy not less than fifteen nor more than eighteen years of age who has been convicted of any offence punishable by imprisonment other than imprisonment for life, is a suitable subject for said school, and that his welfare and the good of society require that he should be sent thereto for industrial training, for instruction and for reformatory treatment, the court may issue a warrant of commitment to said school. So far as they are applicable, except as herein otherwise provided, all provisions of law in relation to commitments to the Lyman school for boys shall extend to commitments to said industrial school. A boy committed to said school as aforesaid may be held therein until he attains the age of twenty-one years, and the custody of such boy shall be in said trustees until that age is attained, excepting during such time as he shall be absent from said school in the Massachusetts reformatory. Said trustees may release from said school upon probation any inmate thereof, and may recall him from probation. They may employ such agents as may be required for the care of such probationers.

SECTION 4. Upon the request of the trustees of the Lyman school for boys, the trustees of said industrial school may transfer to it any inmate of said Lyman school, and may transfer any inmate of said industrial school to said Lyman school with the consent of its trustees. The trustees for children of the city of Boston may transfer to said industrial school any boy committed to the Suffolk school for boys after the passage of this act. Upon application of the trustees, the prison commissioners may remove to the Massachusetts reformatory any inmate of said industrial school, and upon a further application may return him to said school. A boy so removed to said reformatory shall be subject to all laws relating to the other inmates thereof until he is returned to said school. With the consent of the trustees, the prison commissioners may remove to said industrial school any boy under the

age of seventeen years who is sentenced to the Massachusetts reformatory. When a boy is removed or returned under this act, all mittimuses, processes and other official papers, or copies thereof, by which he is held, shall be removed or returned with him; and he may be held in the institution to which he is removed or returned until the expiration of the term for which he was originally committed. After the establishment of said industrial school, no boy who is more than fifteen years of age shall be committed to the Suffolk school for boys.

SECTION 5. The trustees shall have general charge of said school and of all its interests. They shall, from time to time, establish rules, regulations and by-laws for its government, for the direction of its officers and the instruction and discipline of its inmates; and they shall see that its affairs are conducted according to law and to said rules, regulations and by-laws. They shall appoint a superintendent who shall be the executive officer of the school, and, subject to the approval of the governor and council, they shall fix his compensation.

SECTION 6. Said trustees and the state board of charity shall have the same rights and powers, be charged with the same duties and be subject to the same responsibilities in regard to said industrial school and to the officers and inmates thereof as by law are given to or imposed upon said board and upon the trustees of the Lyman and industrial schools in regard to the Lyman school for boys and its officers and inmates. Sections six, seven and nine of chapter eighty-six of the Revised Laws shall apply to the superintendent of said school; and all other laws in relation to the duties, powers and obligations of officers of said Lyman school, so far as they may be applicable, shall extend to officers of the said industrial school.

SECTION 7. For the purpose of meeting the expenses incurred under the provisions of this act, the treasurer and receiver general is hereby authorized, with the approval of the governor and council, to issue scrip or certificates of indebtedness to an amount not exceeding eighty-five thousand dollars, for terms not exceeding thirty years. Such scrip or certificates of indebtedness shall be issued as registered bonds or with interest coupons attached, and shall bear interest at a rate not exceeding four per cent. per annum, payable semi-annually on the first days of May and November. They shall be designated on the face thereof, Prison and Hospital Loan, shall be countersigned by the governor, shall be deemed a pledge of the faith and credit of the commonwealth, and the principal and interest thereof shall be paid at the times specified therein in gold coin of the United States or its equivalent. Such scrip or certificates of indebtedness shall be disposed of at public auction, or in such other manner, and at such times and prices, and in such amounts, and shall bear such rates of interest, not exceeding four per cent. per annum as shall be deemed best for the commonwealth, but none of the same shall be sold at less than the par value thereof. The

sinking fund established by chapter three hundred and ninety-one of the acts of the year eighteen hundred and seventy-four, known as the Prison and Hospital Loan Sinking Fund, shall also be maintained for the purpose of extinguishing bonds issued under the authority of this act; and the treasurer and receiver general shall apportion thereto from year to year an amount sufficient with the accumulations of said fund to extinguish at maturity the debt incurred by the issue of said bonds. The amount necessary to meet the annual sinking fund requirements and to pay the interest on said bonds shall be raised by taxation from year to year.

SECTION 8. This act shall take effect upon its passage.

Approved June 13, 1908.

ACTS OF 1909, CHAPTER 472.

AN ACT RELATIVE TO TRANSFERS AND COMMITMENTS TO THE INDUSTRIAL SCHOOL FOR BOYS.

Be it enacted, etc., as follows:

SECTION 1. The state board of charity shall have the right to transfer boys in its custody between the ages of fifteen and eighteen years to the industrial school for boys; but no boys shall be transferred to said school by the trustees of any institution without the consent of the trustees of the industrial school for boys.

SECTION 2. For a period of two years after the school is declared open its trustees may notify the courts of commitment when the school is full, and no boys shall thereafter, within this period, be committed except with the consent of the trustees; but the courts of commitment shall have during this time the same right to commit boys over fifteen years of age to the Suffolk School for Boys as existed before the said industrial school was declared open.

Approved June 4, 1909.
